

Exciting things are in the works

PROJECT INFORMATION

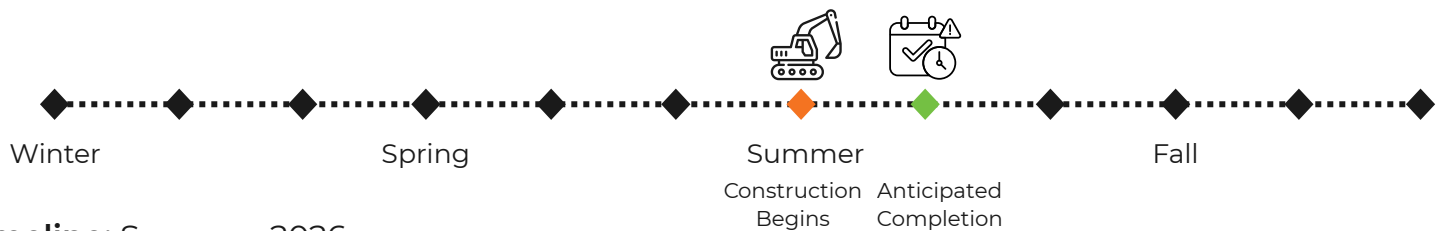

Ice Rink Upgrades

Condenser Replacement

Improving the reliability and sustainability of ice surfaces at Kal Tire Place.

Investment: \$1,000,000

Funding Source: Growing Communities Fund (Provincial Grant), Recreation Reserve, Casino Fund, Infrastructure Reserve

Timeline: Summer 2026

*Schedules are subject change due to weather and other factors.

Current condenser unit at end of life

Example of replacement unit

We're focusing on renewing and maintaining key facility components at Kal Tire Place to keep the facility safe, reliable, and fully operational.

Identified in the Building Facility Renewal Asset Management Plan, the project includes replacing the ice plant condenser, which has reached the end of its life. Benefits of the new unit include:

- Significant enhancements to safety with all ammonia coolant contained within the mechanical room, and 45% less coolant required.
- Operates without water for 90% of the year.

This project will save the City 6.5 million litres of water per year!
