

# Exciting things are in the works

PROJECT INFORMATION

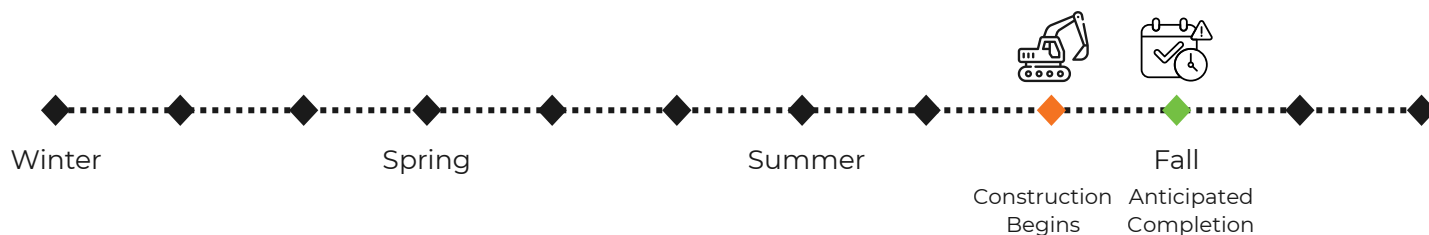

## Flood Mitigation

### Vernon Water Reclamation Centre

Protecting downstream areas through targeted crossing improvements.

**Investment:** \$700,000

**Funding Source:** Sewer Reserve

**Timeline:** Summer - Fall 2026

\*Schedules are subject change due to weather and other factors.

Current outlet crossing at the Vernon Water Reclamation Centre

Concept of new crossing

Building on flood mitigation work completed in 2025, this project upgrades a critical outlet crossing identified as vulnerable during major flood events.

Following the Flood Hazard Assessment in 2023, the City completed the bank armouring in 2025 and the next phase of work is upsizing the crossing above the deep lake outlet.

This crossing allows water to flow when spray irrigation is not in operation. During flood events, the exposed utility crossing is particularly vulnerable, and these upgrades will help reduce risk and improve system resilience.
